TECHNICAL SKILLS

Languages: Python, R, Fortran, bash, SQLite, Matlab, LaTeX, Apache Pig
Operating Systems: OS X, Unix, Windows
Applications and Libraries: Numpy, SciPy, Pandas, BeautifulSoup, ggplot2, Git, SciKit-Learn, Twitter Streaming API, Tableau, Dakota, Maple
Other Skills: Web scraping, linear/logistic regression, support vector machines, uncertainty quantification, numerical linear algebra, reduced order modeling

EXPERIENCE

Data Scientist July 2010-present
University of Michigan, Ann Arbor, MI

- StackOverflow Query Tag Extraction
  - Used Python to analyze over 6,000,000 StackOverflow queries and corresponding tags using MapReduce-type framework.
  - Reformulated raw textual data to a useful form and placed into SQL database for further processing.
  - Developed an algorithm to automatically predict new tags based on similarity to queries in training data set.
- College Basketball Prediction
  - Scraped a decades worth of college basketball data from sports-reference.com/cbb using BeautifulSoup and stored results in SQLite database.
  - Analyzed data and developed a logistic regression model to predict the outcome of unplayed games.
  - Ranked all college basketball teams based on simulations of predictive model.
  - Created a visualization of predictive model performance using Tableau.
- Twitter User Cravings
  - Used Twitter Streaming API to investigate cravings of Twitter users.
  - Utilized Apache Pig to filter and process relevant data.
  - Created a visualization application using Tableau to present results.

Graduate Student Research Assistant July 2010-present
University of Michigan, Department of Nuclear Engineering, Ann Arbor, MI

- Working with Idaho National Laboratory and Sandia National Laboratory to fold high fidelity computer simulations and experimental data for the creation of optimized nuclear fuel performance models.
- Research in how uncertainties in reactor simulation code input parameters propagate to output predictions made by the code.
  - Extensive collaboration with researchers at Oak Ridge National Laboratory.
  - Results of research published in leading journal and awarded first prize at a major technical conference.

- Implemented numerical linear algebra routines into primary software used by Nuclear Regulatory Commission to simulate nuclear reactor accident scenarios.

EDUCATION

University of Michigan — Ann Arbor, MI
Ph.D Nuclear Engineering and Radiological Sciences — Expected 2014

Rose-Hulman Institute of Technology — Terre Haute, IN
B.S. Mathematics — May, 2010
B.S. Physics
Minor: Computational Science
Clarence P. Sousley Award for demonstration of exceptional performance in the mathematical sciences.
